MillerEdge®

MAKING YOUR WORLD A SAFER PLACE

Miller Edge Announces New & Improved Wireless System for the Door Industry

Miller Edge® is proud to announce the newest addition to our monitored wireless system product offering – **RBand for Doors**. RBand for Doors is the latest evolution of the Miller Edge RBand product category.

RBand has been available from Miller Edge for the gate industry for years – with a long track record of reliable and stable performance in the field. With such a successful legacy, the logical progression for the RBand wireless system was to expand its footprint into the door industry. The result is that dealers and installers in the door industry now have a new wireless system with the most advanced features and technology available in a product that has been field tested and proven reliable for years in the gate industry.

RBand for Doors can be purchased as a kit that includes a transmitter and a receiver. The RBand for Doors kit model number is RB-P-K10C. RBand for Doors transmitters can be purchased individually. The RBand for Doors transmitter model number is RB-TX10C.

In comparison to the MEL-II wireless system, the RBand for Doors wireless system offers several upgrades, including:

- Improved RF immunity through software upgrades allowing the units to better ignore RF noise and focus on receiver and transmitter communications
- Improved software, allowing RBand units to self-assess and increase power output depending on the RF interference levels
- Shortened response timing, resulting in exceptional synchronization with any and all operator brands

Pricing or sell sheets, for the RBand for Doors, can be downloaded by clicking the links below. The current published Miller Edge price book includes up to date pricing for RBand for Doors. Please feel free to contact your Miller Edge Sales Representative for any questions regarding RBand for Doors.
