Model # IG-2 Installation Instructions

The Invisi-Guard-2 thru beam photo optic system sends an invisible beam of light from a transmitting unit to a receiving unit. The light beam is intended to function as a protective line guarding a potentially hazardous zone. When the light beam is interrupted by an obstruction, a signal is sent to the motor controls to stop or reverse motion.

IMPORTANT:
READ AND UNDERSTAND ALL INSTRUCTIONS BEFORE BEGINNING INSTALLATION.

1- Parts List

Check to make sure all parts are included.
• IG-2-EM Emitter (1) (Em)
• IG-2-RX Receiver (1) (Rx)
• Mounting Brackets (2)
• Hex Head Mounting Screws (4)
• Flat Washers (4)
• Stop Nuts (4)
• Batteries (2) AA Lithium
• Flexible Conduit (optional)

2- Install Batteries in Emitter

• To open the unit, remove the two (2) phillips screws accessible from the bottom of the lower cap.
• Slide the lower cap from the intermediate piece to expose the PCB.
• Insert AA Lithium batteries noting the polarity.
• Attach Hex Head mounting bolts to Emitter and Receiver by sliding the head of the bolts into the appropriate channel.
• Re-insert the lower cap into the intermediate piece and re-tighten the screws. (Be sure the notched side of the PC Board aligns with the lens side of the housing.)
• Snap on end cap.

3- Mounting

• Select a stable mounting location with a clear line of site to detect obstructions, where the light beam could not be obstructed by plants, leaves, etc.
• Determine horizontal OR vertical bracket mounting direction. For ease of alignment, both transmitter and receiver should be attached in the same direction.
• Attach Mounting brackets to Emitter and Receiver using the provided hex-head bolts and tighten with nuts.
4- Typical Installations

- Sliding Gate Installation
- Door Installation

5- Receiver Wiring Connections

TO AVOID THE RISK OF ELECTROCUTION, TURN OFF AND DISCONNECT ELECTRICAL POWER TO THE MOTOR BEFORE WIRING.

6- Technical Specifications

- Detection Technology: Infrared through-beam
- Infrared Beam Range: 30 feet or 50 feet. 
- Operating Temperature: -22°F to 144°F (-30°C to 60°C)
- Voltage Supply (Em) - 30Ft. 2 x 1.5V, 3Ah, AA Lithium
  - 50Ft. 2 x 3.6V, 2.4Ah, AA Lithium
- Power Supply (Rx) & (Em) 8-30 V AC/DC, 50/60Hz
- 10-24VDC, 100mA
- Low Battery Indicator: White LED indicator light
- Enclosure: NEMA 4

Care and Maintenance:
- Use only AA size lithium batteries.
- Use only a clean lint free cloth to clean transmitting and receiving units.

8- Optional Accessories

• Rubber Boot
  The optional Rubber Boot was designed to provide added protection to the IG-2 photo-eyes. The Black TPE (Thermoplastic Elastomer) acts as a durable cover to help protect the photo-eyes from harsh environments.

How to install the Boot to the Emitter
• Disassemble the Mounting Bracket from the Emitter.
• Slide the Hex Head mounting bolts to the top of the slot.
• Slide the Boot over the top of the Emitter stretching the bottom of the Boot over the screws until they are clear in the slot on the side of the Boot.
• Take care to be sure the Boot is snugly fitted around the Emitter housing.
• Reassemble the Mounting Bracket to the Emitter.
8- Optional Accessories

How to install the Boot to the Receiver

- Disassemble the Mounting Bracket from the Receiver.
- Slide the Hex Head mounting bolts to the top of the slot.
- Remove both screws from the bottom of the Receiver.
- Slide the Bottom Cap & PCB assembly out from the bottom of the Receiver.
- Slide the Hood Sleeve out from the bottom and set it aside. *(It is not needed when using the Boot.)*
- Slide the Boot over the top of the Receiver stretching the bottom of the Boot over the screws until they are clear in the slot on the side of the Boot.
- Take care to be sure the Boot is snugly fitted around the Receiver housing.
- Reassemble the Mounting Bracket to the Receiver.

Extension Pedestal

The Extension Pedestal is made of durable aluminum which matches the exterior housing of both the Transmitter and the Emitter. It provide a means to raise the height of the center of the photo-eyes of the IG-2 from 4 1/2" to 27". It has been designed with a resilient spring loaded mount which will allow for deflection without damage to the unit.

The pedestal may be cut in the field as needed for a specific application.

How to install the Extension Pedestal

- Remove the Bottom End Cap from the Emitter/Receiver.
- Feed the wiring through the center of the Pedestal and out the bottom mounting flange to the attached conduit.
- Place the Transmitter/Emitter on top of the Pedestal taking care to align the bottom of the unit with the connecting flange.
- Press down firmly on the unit until the snap feature engages.
- Use the Bottom Mounting Bracket to attach the IG-2 into position.
