

# Edge Tester

## MET-101

## SENSING EDGE ACCESSORY

Identify the termination and operation of an electric sensing edge with the Edge Tester by Miller Edge. With easy-read LEDs and alligator clips, technicians use MET-101 to determine the internal wiring configuration of a sensing edge for compatibility with the operator or to troubleshoot faults within a system. Unlike a multimeter, MET-101 can identify the proper function of a DC sensing edge. The Edge Tester is an ideal tool for all technicians installing or servicing motorized commercial doors or automated gates.

### APPLICATIONS

- Determine sensing edge wiring termination type
- Test sensing edge signal output

### FEATURES

- Determine the most common internal wiring configurations: 10K, DC, and non-terminated
- Alligator clips allow for quick testing in the field
- Easy-read LED status indicators
- Auto shut-off saves battery life
- Uses a 9 volt battery
- Impact resistant for rugged environments
- 2-year warranty
